

FELCO Special Edition: Prestige Pruning Shears

FELCO, the legendary manufacturer of cutting and pruning tools, teams up with the great leather artisan, D&C Manufacture, to design and produce exceptional pruning shears. The two FELCO Special Edition models, newly launched on the markets, have been considered veritable works of art and should delight both longstanding admirers of FELCO savoir-faire and collectors alike.

The two FELCO Special Edition pruning shears (FELCO 6CC and FELCO 8CC) are based on models FELCO 6 and FELCO 8 of the Classic range. Their parts, made of forged aluminium, have, however, been anodised to create a golden aspect that perfectly complements the sleek lines of the steel blade and anvil-blade of the cutting head. This elegance is enhanced by the fine leather casing of the shears' two handles, designed by D&C Manufacture. The two Special Edition models, sold with a leather case, are sheathed in black packaging with a most stylish effect.

The idea of producing a prestige pruning shear was born on the sixtieth anniversary of FELCO. Initially issued in a limited number, the series saw such success that FELCO decided to make it a regular product in its collection.

D&C Manufacture began its operations in 2001 as a fine leather workshop. The Swiss company specialises in productions combining leather with other materials such as wood, glass, fabric and metal. A supplier to the top brands in timepieces, D&C Manufacture develops original concepts to satisfy the highest demands. Based in Colombier, D&C Manufacture now counts some 12 employees.
